NMT MINI PRO 15/40-130

979525410 NMT MINI

NMT MINI PRO 15/40-130 is a high efficiency (Energy-Efficiency-Index (EEI) \leq 0,18) variable speed circulating pump meant for heating, air conditioning and cooling systems.

The pump includes a permanent magnet synchronous motor, the impeller speed is controlled by a built-in frequency converter.

The pump is controlled using a button on the screen, which displays the current power consumption (W), current pressure (m) and flow rate (m3/hour), as well as error messages. The error is indicated on the screen by a two-digit number that provides a more detailed description.

The following pump operating modes are available:

3 levels of regulation at proportional-pressure operating mode, recommended for radiator heating 3 levels of regulation at constant pressure operating mode, recommended for floor heating 3 levels of regulation at fixed speeds operating mode, recommended for heating and ventilation summer mode - the pump is automatically switched on to minimum speed for a short time when the pump is in standby mode to prevent rotor blocking.

automatic mode - the pump control system finds the optimal operating point, this mode is used in most systems.

night mode (works in parallel with other settings) – when the temperature in the system drops, the pump reduces the speed to a minimum.

The pump has a built-in electronic protection unit that protects the pump from overload. The pump bearings are lubricated by the pumped medium. The pump is equipped with a dry-running protection system - the rotation of the impeller slows down to a minimum if there is no medium in the pump. For normal operation of the pump, it is necessary to use a working medium consisting of clean water or a mixture of clean water and glicol in accordance with current water quality standards for heating systems, for example the German standard VDI 2035. If the glycol content in the working medium exceeds 20%, it is recommended to check the pump parameters Temperature range at an ambient temperature of +25 °C: +2...+110 °C, at ambient temperature +40 °C: +2...+95 °C. Duty point:

• Flow: 0 m3/h • Head: 0 m

Tolerances for head and flow according to ISO 9906-2015.

Electrical data:
• Voltage: 1~230 V

• Maximum current: 0.2 A

Installation data:

• DN: 15

• Installation length: 130 mm

• Net weight: 1.46 kg

The pump is available with threaded (PN10) connection. The hydraulic pump housing is made of gray cast iron, protected by a cataphoresis coating, which makes the pump more resistant to the environment. The rotor can is made of one piece without welding, the rotor cladding is made of AISI 316 stainless steel, the pump shaft is made of AISI 316 stainless steel. The impeller is made of synthetic material reinforced with glass fiber PES GF30. The bearings are made of graphite.

Removable thermal insulation of the pump housing is included in the delivery package.
